

Ecodesign on the Textile Sector

Assignment

1. Units: 01 - 02 2

1. Units: 01 - 02

In the basic module we have seen the general guidelines of Eco-Design, and in these first two units of the textile module, we have made an overview of the two main components of the production reality of the sector: materials and transformation processes.

Based on what you have seen so far, you should identify a reference product, whether it is or has a textile component, just like you already did in the basic module; if you have already chosen a textile product do not change it, we will elaborate on what will be shown during the module

Identify, in general terms, what are the combinations of materials and processes that could be substitutive or evolutionary alternatives to the product, also delineating, where they are found, the interconnections with the topics dealt with so far.
